

The Diseases that we could get from these harmful gasses are: cancer, respiratory problems, athsma, pneumonia, and many more.

The wildlife would be killed off from all the gunk released into our river.

If the business men or women plane to make a factory on the flint river it will pollute the river and put harmful gasses in the air and then over time the harmful gasses get in to our air, and slowly destroy it.

## Save the Flint River

We want to save our river, do you?

All the pollution from the factory would pollute the water to the point where people could not go on the river.

If some business men or women plan to destroy our river, could we eat our fish? Who would clean our drinking water or better yet purify it? No one likes to drink and shower in dirty water. But, if we let these businesses people build this factory it could destroy the ecosystem. That would not be beneficial to us.
