

# Flint River

Should a factory be allowed to be built on the Flint river..

People want to build a factory over the flint river. Should we let them?

The flint river already is one of the most polluted rivers in Georgia, yet these business men and women want to boost the rate pollutants are being added in the river. Factories have been proven to produce some of the most pollution in the world.

If we continue to protest and we convince the government we may be able to save one of our beloved rivers in our Georgia water system.
