

The structure and function of a muscle articulation-type jaw joint of a polychaete worm
Theodore A. Uyeno & William M. Kier

Supplementary Figure 1

An interactive view of a three-dimensional schematic diagram of the pharyngeal bulb of *Alitta virens*. The rotatable diagram shows the outer surface and the esophageal lumen of the bulb, the everted jaws, and the complex multiple orientations of muscle fibers that compose the muscle articulation-type joint. Comparison of figures 2-6 to this supplementary figure will aid in visualizing how the multiple orientations of fibers are organized relative to each other in three-dimensional space.
